Dental assistant

Average salary: $49,000
Career trend: steady

Job description

Dental assistants are a vital part of a dental team. They assist dentists, hygienists and therapists to provide the best possible dental care to patients.

What dental assistants do

Dental assistants increase the efficiency of dental offices by applying technical, administrative and people-focused skills to offer patients high quality oral care.

Most dental treatment procedures require the hands-on support of a dental assistant who works directly under the dentist’s guidance. One of their jobs is to help patients feel comfortable. They settle patients and prepare them for their check-up, surgery or procedure.

They provide patients with instructions for appropriate oral hygiene strategies to maintain oral health e.g. tooth brushing, flossing, nutritional counselling and oral care following surgery or other dental treatment procedures, such as the placement of a restoration (filling).

Dental assistants support dentists with procedures such as fillings, crowns and extractions. They take and pour dental impressions, combat infection through equipment sterilisation and conduct x-rays.

Dental assistants may also perform administrative duties such as maintaining patient records, office management, scheduling appointments, and billing patients.

Dental assistants may be required to wear a uniform, safety glasses, surgical masks, protective clothing and gloves to protect themselves and patients from infectious diseases. They must also follow safety procedures to minimize risks associated with x-ray machines.

You’ll like this job if...

You’re empathetic and cooperative. You are organised, prepared and make meticulous records. You pay attention to detail. You stay focused during recurring tasks. You’re customer-service focused. You’re good at precise communication, with strong interpersonal skills. You use critical thinking, reasoning and logic to solve problems. You’re comfortable complying to regulations.
